<sup>1</sup> Computed by comparison to  $^{20}\text{Ne}$  signal in air pipettes. 1-sigma uncertainty includes measurement uncertainty of  $^{20}\text{Ne}$  signal in this analysis and the reproducibility of the air pipette signal

<sup>2</sup> Computed by comparison to  $^{21}\text{Ne}$  signal in air pipettes. 1-sigma uncertainty includes measurement uncertainty of  $^{21}\text{Ne}$  signal in this analysis and the reproducibility of the air pipette signal

<sup>3</sup> Computed by comparison to  $^{22}\text{Ne}$  signal in air pipettes. 1-sigma uncertainty includes measurement uncertainty of  $^{22}\text{Ne}$  signal in this analysis and the reproducibility of the air pipette signal

<sup>4</sup> Isotope ratio measured internally during each analysis; does not involve normalization to the Ne isotope signals in the air pipettes.

<sup>5</sup> Computed by comparison of  $^{21}\text{Ne}$  or  $^{22}\text{Ne}$  signal to air pipettes, whichever is more precise. Assumes that Ne in sample is a binary mixture of atmospheric and cosmogenic Ne.
